

Erasable and Curable Ink and Ink Delivery Device

Track Code: 2015-BOUD-67023

Categories:

- Chemical Engineering

Keywords:

- Chemical Engineering
- Erasable Ink
- Fraud Prevention
- Security
- Testing

Currently, it is the job of test administrators and instructors to ensure that cheating does not occur. Not only does cheating go undetected, but often, the administrators and instructors are at the heart of the cheating scandal. As such, this level of security is not sufficient. While some standardized exams are moving to online systems, it is not feasible to have many high value exams, e.g., state standardized tests, ACT, SAT, performed in a computer-based environment due to the high cost of implementation.

Researchers at Purdue University have developed an ink formulation that allows the ink to be erased for a given period of time (15 minutes to 2 hours), which is tunable based on the ink composition. Furthermore, this ink contains carbon black, which makes it readable by automated standardized testing scanners. As a result, this ink formulation could act as a drop-in replacement for No. 2 pencils and other commonly used marking instruments with very little pushback.

Advantages:

- Erasable yet will cure to a permanent ink
- Compatible with No. 2 pencil

Potential Applications:

- Standardized testing
- Artist inks

People:

- Boudouris, Bryan William (Project leader)
- Alcorace, Emily
- Dodd, Robert
- Sargent, Jessica L

Intellectual Property:

Application Date: August 23, 2017

Type: NATL-Patent

Country of Filing: United States

Patent Number: 10,513,621

Issue Date: December 24, 2019

Application Date: February 29, 2016

Type: PCT-Patent

Country of Filing: WO

Patent Number: (None)

Issue Date: (None)

Application Date: February 27, 2015

Type: Provisional-Patent

Country of Filing: United States

Patent Number: (None)

Issue Date: (None)
